BNEXT AI

The Power of AI

SAFE AI ADOPTION LAB · EXPANDED EDITION

Safe AI Adoption risk mitigation checklist

Work through the seven sections in order for the AI use case you are planning. Twenty-six items, one working session. Items you can't tick yet are your to-do list.

BEFORE YOU START *pick one thing, and know what better looks like*

- [ ] **Pick one low-risk, high-frequency task**
  Something that happens weekly and costs nothing if AI gets it wrong. Not payroll, not legal.
  Notes
- [ ] **Write the "done" number**
  Hours saved, response time or error rate. Decide now how you will tell in 60 days whether it worked.
  Notes

DATA AND PRIVACY *what goes in, and where it lives*

- [ ] **Decide what data can go in**
  Public info is fine from day one. Customer, staff and payroll data wait for an approved tool.
  Notes
- [ ] **Set up a proper business account**
  A paid plan with no training on your data, stored where you approve, and yours to take if you leave.
  Notes
- [ ] **Know your personal-information obligations**
  PIPEDA applies to small shops too. Consent given for one purpose does not automatically cover AI use.
  Notes
- [ ] **Separate your data from your prompts**
  Strip names, emails and account numbers before pasting. Use placeholders like [CLIENT].
  Notes
- [ ] **Set a retention rule**
  How long the tool keeps chat history and uploads, and who is responsible for deleting them.
  Notes

SECURITY AND CONTROLS *who can act, and how you stay in charge*

- [ ] **One use case, one owner**
  Name what AI will do first and who is in charge. Write both in the notes below.
  Notes
- [ ] **One login each, nothing shared**
  Own login, two-step sign-in, and the tool sees only what it needs.
  Notes
- [ ] **A person approves the big stuff**
  Money, signatures and anything customers or job applicants see get a human okay first.
  Notes
- [ ] **You can switch it off today**
  One named person can pause the tool at any time, and a one-page plan covers a bad day.
  Notes
- [ ] **Treat AI like a new hire with no judgment**
  It can be tricked by what it reads: emails, web pages, documents. Nothing it reads counts as an instruction.
  Notes
- [ ] **Check it monthly, not just at setup**
  Spot-check ten outputs. Log the misses and who fixed them.
  Notes
- [ ] **Know your vendor's incident contact**
  Who you call, and what they promise in writing, if your data leaks.
  Notes

OWNERSHIP AND IP *what your business keeps*

- [ ] **Your work stays yours**
  Before anyone clicks agree, the terms must say your data and results belong to you.
  Notes
- [ ] **Keep a record of the human touch**
  Note who guided and edited the AI's work, and set ownership in your contracts.
  Notes
- [ ] **Don't put in what you don't own**
  Client files, licensed images and competitor material can create liability on the way out, not just the way in.
  Notes
- [ ] **Check outputs for other people's work**
  AI can reproduce copyrighted or trademarked content. Review anything customer-facing before it ships.
  Notes

PEOPLE AND TRAINING *what your team knows, and can say*

- [ ] **Tell staff what's allowed, in one page**
  Approved tools, banned data, and who to ask when unsure.
  Notes
- [ ] **Train before you deploy**
  Thirty minutes on prompting and on spotting confident wrong answers.
  Notes
- [ ] **Make it safe to report a mistake**
  No blame for flagging an AI error. Blame for hiding one.
  Notes

CUSTOMERS AND TRANSPARENCY *what people outside the business can expect*

- [ ] **Tell customers when AI is talking to them**
  Chatbots, drafted emails, generated images. A short notice is enough.
  Notes
- [ ] **Keep a human path**
  A visible way to reach a person, especially for complaints, refunds and anything legal.
  Notes
- [ ] **Watch for bias in decisions about people**
  Hiring, pricing, credit, tenant screening. Human-rights and accessibility rules apply whoever made the call.
  Notes

REVIEW AND EXIT *how it stays safe, and how you leave*

- [ ] **Date the next review**
  Ninety days, then quarterly. Re-run this checklist when the tool, the terms or the use case changes.
  Notes
- [ ] **Have an exit plan**
  Export format, how long it takes, and what you would lose if you stopped tomorrow.
